17 Cut 45-degree angles on one end of two 1x6s and lay the points in the lower corners of the frames. Mark the other ends and cut and nail them in place. Cut and nail the rest of the boards, spacing them about 1/4 in.

18 Cover the board edges with a second frame. Fasten it with a 2-in. screw into each panel board and two at each end. Flip it over and screw the other side the same way.

19 Space the gates 1/2 in. apart on the ground and screw two 8-ft. boards to each. Prop the gates in the opening, space them and screw the boards to the posts. Attach the hinges and foot stop. Set the foot stop pipe and attach a 1x4 gate stop to the fixed gate, leaving a 1-in. overhang. Attach the latch.
